

Accelerated Cure Project for MS

May 2019

iConquerMS™ Spotlight – A Network That Includes Everyone Living with MS

[iConquerMS](#) empowers **everyone** affected by MS to participate in research. Network members are invited to contribute health information, participate in clinical studies, as well as suggest topics for research in the future. This valuable input will bring researchers closer to better diagnoses, improved treatments, and one day, a cure for MS. Data from caregivers and family members are also essential to the initiative's mission as they help investigators better understand the impact of MS on those who live as care or support partners to someone living with the disease. We will soon be inviting iConquerMS members to join a [mindfulness study](#) that hopes to recruit more than 2,000 adult subjects nationwide, including people with MS, their caregivers and family members. The knowledge gained will help those living with MS and their clinicians better understand the best dose of mindfulness to manage stress and increase wellness, with a substantial impact on care. Are you an iConquerMS member and are you interested in learning more? [Email us!](#) Do you have a spouse, parent or care partner that might be interested in participating? Encourage them to [join](#) the network and start contributing their data today! If you haven't already done so, please consider [enrolling](#) in iConquerMS. Whether you have MS or not, every piece of data expands the pool of information that investigators can draw from.
