Partner with ACP to Accelerate Your MS Research

Eliminate the barriers delaying your research. Access the high-quality biosamples, real-world data, and MS community insights you need to propel your work forward.

Accelerated Cure Project for MS (ACP) accelerates research by solving three critical challenges: access to biosamples and data, recruitment of engaged participants, and inclusive study design. Whether you're in academia or industry, our integrated platforms provide everything you need to move faster—from hypothesis to breakthrough.

ACP REPOSITORY

Access biosamples from 3,200+ individuals with MS, related demyelinating diseases, and healthy controls—each linked to comprehensive clinical data, exome sequence, genome-wide SNP arrays, and extensive omics datasets. Gain access to extremely well-annotated biosamples and all of the returned data.

iCONQUERMS

Collaborate with our network of 10,000+ engaged participants ready to contribute to your research. Collect real-world data, gather community insights, facilitate focus groups, and access diverse populations—including adults, youth with pediatric MS, and care partners. No recruitment delays. No barriers to participation.

THE RIDE COUNCIL

RESEARCH | INCLUSION | DIVERSITY | EQUITY

MS MINORITY RESEARCH ENGAGEMENT PARTNERSHIP NETWORK

Design studies that reflect the full diversity of the MS community. Our Research, Inclusion, Diversity, and Equity (RIDE) Council provides hands-on project consulting, while the MS Minority Research Engagement Partnership Network (MREPN) offers strategic tools and resources. Build trust with underrepresented communities and strengthen your science.

Why Partner with ACP?

- **Integrated ecosystem:** Biosamples, data, and engagement with the MS community—all connected
- **Faster timelines:** Skip recruitment delays and access ready-to-use resources
- **Real-world relevance:** Research grounded in lived experience and underrepresented communities
- **Growing dataset:** 150+ studies contributing data back to our repository combined with longitudinal data from iConquerMS network, creating one of the richest MS research resources available

Let's Start the Conversation

Contact our partnerships team to discuss your specific needs and explore how we can help you achieve your mission by emailing Partner@AcceleratedCure.org.

Accelerated Cure Project for Multiple Sclerosis (ACP) is a nonprofit founded by a person living with MS, driven by a core belief: research moves faster and has greater impact when the people most affected help shape it. ACP brings together the entire MS community — people affected by MS, researchers, healthcare providers, funders, and partners — in a connected ecosystem built for MS research. That ecosystem includes the ACP Repository, which provides researchers with high-quality biosamples and data; iConquerMS, ACP's people-powered research network; and initiatives that enable more inclusive, equitable, and representative MS research.
